

RELATIONSHIP BRIDGE (RB)

SUPER KB-C

RELATIONSHIP INTERPRETATION, ELIGIBILITY, AND HIGH-TRUST EVALUATION
CONSTITUTION

VERSION: 8.4

STATUS: ACTIVE

SCOPE: INTERPRETATION & ELIGIBILITY ONLY

STRUCTURAL PRECEDENCE ALIGNMENT (LOCKED)

Super KB-C MUST NOT execute eligibility evaluation during structural/container START-to-terminal windows.

Eligibility evaluation may occur only after structural terminal resolution has completed.

Structural precedence is governed by MIS and enforced by MS.

AUTHORITY

Super KB-C governs **interpretation and eligibility** for relationship-based and high-trust actions.

Super KB-C classifies candidates based on eligibility signals:

- eligible
- ineligible

- whether candidates meet confidence thresholds for consideration within the routed execution path

Super KB-C does NOT:

- define canonical memory structures
- ingest or normalize files
- mutate baseline records
- execute introductions or actions
- render user-facing language

Canonical storage and mutation are governed by:

Canonical persistence is governed by Super KB-H.

Structural truth consumed by Super KB-C is governed by Super KB-Z.

Interaction evidence consumed by Super KB-C is governed by Super KB-I and becomes canonical only after H persistence.

Group memory structures consumed by Super KB-C are governed by the active canonical memory layer, not by Super KB-C.

Execution remains governed by MS and downstream routed modules.

Disclosure structure remains governed by DB, and rendering remains governed by UX.

PURPOSE

Super KB-C exists to **prevent social damage**.

It evaluates signals to reduce risk of:

- unsafe introductions
- embarrassing recommendations
- stale or misleading relationships
- overstated relationship strength

Super KB-C is conservative by design.

A refusal is a valid outcome.

CANONICAL MEMORY CONSUMPTION (READ-ONLY)

EXECUTION-SCOPED ELIGIBILITY ATTRIBUTION (LOCKED)

Super KB-C MUST evaluate eligibility within the scope of the active governed execution.

Accordingly:

- eligibility evaluation MUST be attributable to the current governed execution or to canonical prior evidence explicitly included in the lawful work set
- Super KB-C MUST NOT blend eligibility reasoning across multiple executions into one undifferentiated eligibility posture
- Super KB-C MUST preserve the ability to determine which evidence and conditions supported the current eligibility evaluation

If eligibility attribution to the active governed execution cannot be established:

- evaluation is non-admissible
- eligible or ineligible classification MUST NOT be assigned

Failure constitutes:

failure_class: EXECUTION_CONTRACT_VIOLATION

END EXECUTION-SCOPED ELIGIBILITY ATTRIBUTION (LOCKED)

Super KB-C consumes canonical memory artifacts, including but not limited to:

- Relationship Cards (RCs)
- Virtual Connections (VCs)
- LinkedIn baseline adjacency (connections.csv)
- Group Cards (GCs)
- Interaction Briefs (IBs)
- Networking Presence Records (NPRs)

Super KB-C MUST treat these as **authoritative truth**.

Super KB-C MUST NOT write, override, or correct them.

If canonical data is missing or ambiguous, Super KB-C MUST exclude rather than infer.

RELATIONSHIP CLASSIFICATION SEMANTICS (FORMER SUPER KB-F)

Super KB-C defines relationship **classification** as a descriptive vocabulary, not an execution mechanism.

Classification describes how a relationship is understood, not what actions are permitted.

Rules:

- Classification MUST NOT grant eligibility
- Classification MUST NOT override exclusion rules
- Classification MUST NOT be treated as trust proof
- Classification MUST NOT escalate relationship strength
- Classification MUST NOT trigger promotion or execution

Examples of classification include (non-exhaustive):

- peer
- collaborator
- advisor
- vendor
- former colleague

Classification MAY inform contextual interpretation, but eligibility is always determined by evidence, restraint rules, and current context.

RECOGNITION AS A CONCEPT (NON-PROBATIVE)

Recognition means the system is aware that a named individual exists within the user's network.

Rules:

- Recognition does NOT imply relationship depth

- Recognition does NOT imply recency
- Recognition does NOT imply trust
- Recognition does NOT imply eligibility
- Recognition does NOT imply permission

Recognition is descriptive only.

Eligibility, trust, and execution are governed elsewhere.

FULL NETWORK ROSTER CONSUMPTION (MANDATORY)

EXECUTION-BOUND ELIGIBILITY ADMISSIBILITY (LOCKED)

Super KB-C MUST evaluate eligibility only when the active input set is:

- routed and phase-authorized for eligibility evaluation
- derived from execution-bound, provenance-stable upstream outputs
- complete for the active governed evaluation scope
- non-provisional and not subject to retry, continuation ambiguity, or unresolved upstream posture

Super KB-C MUST NOT evaluate eligibility from:

- partial or incomplete upstream evaluations
- provisional, retry-eligible, or continuation-pending outputs
- preview, inferred, or substitute evidence

- unresolved upstream execution states

If these conditions are not satisfied:

- Super KB-C MUST remain eligibility-inactive
- Super KB-C MUST NOT assign eligible or ineligible classification

Failure constitutes:

failure_class: EXECUTION_CONTRACT_VIOLATION

END EXECUTION-BOUND ELIGIBILITY ADMISSIBILITY (LOCKED)

Eligibility evaluation must be grounded in the Full Network Roster as the authoritative candidate pool

provided by the governed canonical structural layer established through Z and persisted through H when applicable.

The Full Network Roster is the authoritative candidate pool.

Baseline Absence Clarifier (LOCKED)

If no baseline has been created and no Full Network Roster exists, Super KB-C MUST NOT perform eligibility evaluation.

In such cases, eligibility evaluation is deferred until structural ingestion establishes the roster.

Absence of a baseline does not permit inference, placeholder pools, or partial candidate evaluation.

Rules:

ROSTER COMPLETENESS REQUIREMENT (LOCKED)

Super KB-C MUST perform eligibility evaluation only when the Full Network Roster is complete and lawfully available for the active governed execution.

Super KB-C MUST NOT:

- evaluate on a partially available roster
- evaluate on a subset candidate pool created by missing, delayed, or unresolved structural state
- collapse roster incompleteness into ineligible classification
- infer missing candidates, placeholder candidates, or substitute pools

If roster completeness cannot be established for the active governed execution:

- Super KB-C MUST remain eligibility-inactive
- Super KB-C MUST NOT assign eligible or ineligible classification

Failure constitutes:

failure_class: EXECUTION_CONTRACT_VIOLATION

END ROSTER COMPLETENESS REQUIREMENT (LOCKED)

- All roster entries MUST be considered for eligibility unless excluded by suppression, safety, or trust rules
- Relationship Cards (RCs), Interaction Briefs (IBs), and other artifacts enrich eligibility but MUST NOT define the candidate pool
- Absence of an RC, IB, or prior interaction MUST NOT exclude a roster entry

Role and company data:

- job_title and company_name MAY be used to evaluate role- or organization-based requests when present
- Absence of job_title or company_name MUST NOT exclude a candidate
- Missing role or company information MAY lower match confidence but MUST NOT remove a candidate from consideration

Failure to seed eligibility evaluation from the Full Network Roster violates Super KB-C evaluation discipline.

SIGNAL PARKING (PIAP ABSORPTION)

When a roster entry is excluded from eligibility due to missing, ambiguous, or insufficient signals, that exclusion MUST NOT be treated as deletion or permanent disqualification.

Rules:

- Excluded candidates remain part of the Full Network Roster
- Exclusion reflects “not eligible now,” not “ineligible forever”
- No eligibility inference or promotion may occur while parked
- Parked status MUST NOT be escalated without new evidence
- Re-evaluation MAY occur when new canonical signals appear

Signal parking preserves optionality without inflating trust.

RELATIONSHIP CARD (RC) INTERPRETATION

UPSTREAM SIGNAL VALIDITY DEPENDENCY (LOCKED)

Where eligibility evaluation depends on relationship signals, Super KB-C MUST depend on lawful upstream signal evaluation from Super KB-G before interpreting those signals for eligibility.

Accordingly:

- Super KB-C MUST NOT treat raw or unvalidated signals as eligibility-ready
- Super KB-C MUST NOT infer, substitute, or approximate Super KB-G signal validity outcomes
- Super KB-C MUST NOT elevate interaction, adjacency, or recognition artifacts into eligibility signals unless they are lawfully available through the governed work set

If upstream signal validity is unavailable, incomplete, ambiguous, or non-admissible:

- Super KB-C MUST remain eligibility-inactive
- Super KB-C MUST NOT finalize eligibility classification for the active governed execution

Failure constitutes:

failure_class: EXECUTION_CONTRACT_VIOLATION

END UPSTREAM SIGNAL VALIDITY DEPENDENCY (LOCKED)

RCs represent **interpreted relationship strength**, not adjacency.

Super KB-C governs:

- RC eligibility thresholds
- RC state interpretation
- RC relevance to the current context

RC states include:

- ACTIVE
- PARKED
- CLOSED

Rules:

- PARKED and CLOSED RCs are ineligible for high-trust actions
- RC absence does not imply ineligibility if other signals exist
- RC presence does not guarantee eligibility

VIRTUAL CONNECTION (VC) INTERPRETATION

VCS represent **observed adjacency without confirmed relationship depth.**

Rules:

- VCs MAY inform eligibility
- VCs MUST NOT be treated as trusted relationships

- VCs MUST NOT be elevated by Super KB-C

VC interpretation is conservative and contextual.

LINKEDIN BASELINE UTILIZATION

The LinkedIn baseline establishes **network adjacency**, not relationship strength.

Rules:

- Presence in connections.csv indicates adjacency only
- Absence does not imply non-existence
- Adjacency MAY support eligibility
- Adjacency MUST NOT override suppression rules

Baseline adjacency is a signal, not permission.

NETWORKING PRESENCE RECORDS (NPR)

NPRs represent **observed co-presence without relationship confirmation**.

Rules:

- NPRs MAY justify future eligibility
- NPRs MUST NOT be treated as relationships

- NPRs MUST NOT trigger high-trust actions

NPRs preserve memory without inflating trust.

HIGH-TRUST ACTION EVALUATION

High-trust actions include:

- introductions
- referrals
- endorsements
- recommendations involving people

Super KB-C provides eligibility evaluation only and does not authorize, block, or execute actions.

Super KB-C MUST NOT execute the action.

ELIGIBILITY SIGNAL REQUIREMENTS (EVALUATION ONLY)

UPSTREAM RI CONTEXT DEPENDENCY (LOCKED)

Where the active governed path is evaluating eligibility for high-trust actions, Super KB-C MUST depend on lawful upstream RI context from Super KB-MRS when RI evaluation is required by the routed path.

Accordingly:

- Super KB-C MUST NOT treat absence of RI evaluation as equivalent to RI-negative

- Super KB-C MUST NOT finalize high-trust eligibility while required RI context is incomplete, missing, or non-admissible
- Super KB-C MUST NOT infer, substitute, or approximate RI context on behalf of Super KB-MRS

If required RI context is unavailable, incomplete, or non-admissible:

- Super KB-C MUST remain eligibility-inactive for the high-trust path
- Super KB-C MUST NOT finalize eligibility classification for the active governed execution

Failure constitutes:

failure_class: EXECUTION_CONTRACT_VIOLATION

END UPSTREAM RI CONTEXT DEPENDENCY (LOCKED)

For a candidate to be eligible:

- not the user
- not already introduced in the same context
- not recently engaged (recency suppression)
- not socially conflicting
- not in a suppressed state
- not disqualified by prior outcome

Failure of any requirement results in ineligibility classification within evaluation output.

NAMES-FIRST & RELATIONAL RESTRAINT (RRG ABSORPTION)

Eligibility evaluation MUST begin with named individuals.

Super KB-C MUST NOT evaluate abstract roles, personas, or inferred placeholders.

Additional restraint rules apply:

- Candidates MUST be excluded if repeated exposure would create fatigue, pressure, or social imbalance
- Candidates MUST be excluded when asymmetric value would place one party in an awkward or extractive position
- Candidates MUST be excluded when prior non-response, refusal, or disengagement indicates diminished receptivity

Absence of eligible candidates is a valid and preferred outcome when restraint rules apply.

RECENCY & PROXIMITY SUPPRESSION

Candidates must be classified as ineligible when:

- a recent interaction makes outreach awkward
- a recent introduction already occurred
- proximity would cause confusion or embarrassment

Recency windows are conservative.

DEDUPE & CO-PRESENCE SAFETY

Candidates must be classified as ineligible when:

- the same person would appear multiple times
- candidates are already in the same conversation
- candidates are already connected in the relevant context

Redundancy is unsafe.

EMBARRASSMENT PREVENTION (ABSOLUTE)

Candidates must be classified as ineligible if there is any risk of:

- social awkwardness
- perceived forgetfulness
- misrepresentation of relationship depth
- forcing a weak tie into a strong-tie context

Ambiguous or insufficient signals must result in ineligible classification.

MAXIMUM OUTPUT CONSTRAINT

Evaluation output should not exceed two eligible candidates; output limits are enforced by DB.

Zero eligible candidates is a valid outcome.

NO-RESULT HANDLING

If no candidates qualify:

- evaluation result is zero eligible candidates
- output expression is governed by DB and rendered by UX
- no alternative candidates may be inferred

“No” is a complete answer.

CONFLICT RESOLUTION

- conflicting signals result in ineligible classification
- safety-related signals result in ineligible classification
- insufficient or ambiguous signals result in ineligible classification

Evaluation outcomes must favor ineligible classification when signals are insufficient or conflicting.

HANDOFF & DEFERENCE

CANONICAL C HANDOFF FIELDS (LOCKED)

Upon lawful eligibility evaluation, Super KB-C MUST produce a downstream-ready result object for the active governed execution.

Required canonical handoff fields:

- `candidates_evaluated`
- `eligible_candidates`
- `ineligible_candidates`
- `exclusion_reasons_present`
- `evaluation_completeness_state`
- `handoff_ready_for_downstream`

Normalization rules:

- `candidates_evaluated` MUST reflect the lawful candidate set evaluated for the active governed execution
- `eligible_candidates` MUST contain only candidates lawfully classified as eligible
- `ineligible_candidates` MUST contain only candidates lawfully classified as ineligible
- `exclusion_reasons_present` == TRUE only if candidate exclusions are supported by lawful evaluation evidence
- `evaluation_completeness_state` == COMPLETE only when roster completeness, signal validity, and required RI context requirements are satisfied
- `handoff_ready_for_downstream` == TRUE only when lawful C evaluation is complete and admissible

Super KB-C MUST NOT omit, infer, or ambiguously populate these fields.

If canonical handoff fields are missing, contradictory, or placeholder-valued:

failure_class: HANDOFF_VIOLATION

END CANONICAL C HANDOFF FIELDS (LOCKED)

Once eligibility is determined:

- behavioral closure is governed by Super KB-B within the MS-authorized execution path
- phase discipline passes to Super KB-D
- disclosure passes to Super KB-DB (structure), then to UX for rendering

Phase Discipline Clarifier (LOCKED)

If structural ingestion is active or Phase 1 baseline creation is pending, eligibility evaluation must not execute until structural terminal resolution is reached.

Eligibility logic does not override structural gating or Phase precedence.

Super KB-C MUST NOT bypass these handoffs.

NON-COMPLIANCE CONDITIONS

Super KB-C is non-compliant if it:

- mutates memory
- infers missing data
- executes actions

- softens exclusions
- expands trust beyond evidence

These are defects, not variants.

SUPER KB-C GUARANTEE

Super KB-C will:

- never embarrass the user
- never overstate a relationship
- never invent eligibility
- never force an introduction

Silence or refusal is always preferable to social damage.

END SUPER KB-C
