

Giving **Pollo Campero** a secure, modern and innovative Digital Menu Board solution

RFI Response

August 21, 2026

Proposal to Pollo Campero

We are excited to grow our partnership with Pollo Campero. The Genius software and hardware solutions enable businesses to transform food service experiences and keep guests coming back. Our Genius Digital Menu Board (DMB) solution is an excellent fit to your immediate need.

However, for the future of your business and long-term strategy of vendor consolidation, we believe the combination of Genius + Worldpay gives you the ability to consolidate vendors and bundle capabilities. With our integrated cloud-based platform including point of sale, back office, digital menu signage, kiosk and customer engagement solutions, we strongly believe collaboration with Genius will provide you with not only a best-in-class experience through our Digital Menu Board (DMB) solution, but a roadmap to more vendor consolidation by adopting the rest of our platform where and when it makes operational and economic sense.

We thank you for your time and we welcome the opportunity to share thoughts and cultivate new ideas that will help further differentiate in a crowded marketplace.

Here is what you will find in the enclosed RFP response:

Katherine Celeste Urbina Barillas

Purchasing Specialist

katherine.urbina@somoscmi.com

Dear Katherine Celeste Urbina Barillas,

It is with much enthusiasm that we submit our response to Pollo Campero Digital Menu Boards Request for Information.

Pollo Campero is the destination customers seek for a unique food experience that's full of life, seasoned with a little zest, and a flavor that's more than skin deep—that's bold, complex and a little unexpected. And like Pollo Campero, we too offer bold, complex and unexpected solutions to help you consolidate your vendor stack and remove costs. Global Payments, together with our Genius platform, holds the advantage of combining innovative restaurant technology, payments, and an unmatched international scale under one relationship.

From Digital Menu Boards (DMB) to POS systems, and Kitchen and Back Office solutions, our Genius platform powers businesses from street eats to stadium seats. That's why we are eager to show how uniquely experienced we are to be your new DMB provider to support all current and future locations. Our solutions are built to be fault-tolerant, both in the physical store locations and in the cloud, to ensure that your restaurants can transact business, prepare, and serve customers without interruption.

It's this flexibility that can allow you to start with our DMB solution without being required to replace your existing technology, while retaining the ability to consolidate additional capabilities with us over time. A sound **flexibility today, consolidation opportunity tomorrow** approach allows you the best opportunity to remove costs and innovate your business now and into the future. This enables Pollo Campero to do what you do best, creating great experiences for your customers to come together-intentionally.

As a 42-year veteran of the Enterprise Restaurant business with solutions that meet every restaurant's technology need and backed by a global payments company for financial stability, we believe we are exceptionally positioned and experienced to meet and exceed Pollo Campero's business objectives. We work with all our clients to limit business disruption, enhance the customer experience and cost-effectively support operators across all geographies.

Within our responses in the RFP evaluation worksheets, and in the related attachments, we want to instill your trust in the following points of difference:

Our experience gives Pollo Campero a trusted partner: Pollo Campero can be confident in knowing Genius is a combination of XPIENT, SICOM, and RTI – three powerhouse companies. Our innovative mindset and practice are rooted in decades of restaurant technology experience. We are very proud of the company we keep, and today we are the technology partner for 17 of QSR Magazine's Top 50 brands.

Future Proofing: Our cloud-based solutions are built to be nimble. We can naturally adapt and innovate with Pollo Campero partners as the technology environment and consumer expectations evolve. With Genius as your cloud Digital Menu Board partner, Pollo Campero will be “Future Proofed.”

Scale & Reach: Pollo Campero will join more than 51,000 restaurants and 110,000 merchants in over 62 countries worldwide that choose our purpose-built technology solutions to help deliver positive customer experiences. Genius leverages Global Payments’ reach across the globe to support your global infrastructure requirements and deliver best-in-class services to franchisors and franchisees.

No Rip & Replace: Genius is experienced to support and service fast-growing franchise partner communities, having tailored our approach for the unique standards and timelines of tens of thousands of operators all while minimizing impact to restaurants operators.

Low Cost of Ownership: With the idea of flexibility today, consolidation opportunity tomorrow, your Genius journey can start with DMB but then evolve over time and your needs to other components like payments, back office and others. This allows you the flexibility to generate cost savings over time by consolidating services under one vendor, instead of many.

Global Payments welcomes the opportunity to begin our partnership with Pollo Campero and modernize how your customers experience the brand with enhanced in-store technology.

We appreciate your time and consideration and look forward to presenting how Genius can serve as a reliable, long-term technology foundation for Pollo Campero restaurant operations now and in the years ahead.

Sincerely,

Michael Schwartz

Executive Summary

Genius Digital Menu Boards

Genius Digital Menu Board allows you to update pricing, promotions and menu content in real-time across indoor, outdoor, pre-sell and confirmation displays. It's directly integrated with POS and pricing tools, ensuring consistency and agility in QSR, fast casual and cafes.

But furthermore, DMB is just one component of a full stack of technology designed for the QSR space. Rather than adding another standalone vendor to the mix, add a capability to a partnership that can grow with Pollo Campero.

Genius can solve the immediate DMB requirement, integrate with your existing environment, support your domestic and international growth, and give you the option to consolidate restaurant technology and payments over time, where doing so reduces complexity and creates better economics.

Key benefits include:

- **Boosted customer order size** Guests spend more when influenced by dynamic menus.
- **Real-time remote updates** Instantly update prices, specials or sold-out items with centralized control across multiple locations.
- **Customization** Tailor menu boards by time, location and guests.
- **Highlight promos** Spotlight seasonal and high-margin items, promote combo deals, loyalty programs and more.
- **Durability** Provides commercial-grade displays built for long hours and different environments.
- **Immersive and mighty** Our indoor electronic menu boards set the standard with vivid, realistic picture quality and HD resolution, and a thin bezel size and screen thickness for a sleek look.

Genius Digital Menu Board software is built for ease and speed. It features a no-code, drag-and-drop interface that allows operators to update menu items, pricing, images and promotions without needing technical support. The intuitive UI enables quick scheduling of the menu. Whether you're managing one location or hundreds, the experience is designed to be fast, scalable and user-friendly for busy teams.

The Winning Formula for Pollo Campero

Genius gives Pollo Campero a strong solution for your DMB requirements while creating a foundation for broader vendor consolidation, integrated restaurant technology and payments and international growth over time.

Our DMB solutions, developed, deployed and supported by Global Payments provide:

- Multiple solutions for both immediate, mid-term, and long-term needs.
- The technical know-how to work around-the-clock to solve for different scenarios.
- The deepest support of people across a breadth of functions to develop solutions for Pollo Campero.
- Our solutions are built on an open API architecture that supports integrations with many different third-parties for both pricing and OCU integrations. This affords us some flexibility to work with impactful, existing third-parties like Oracle and NCR.

Additional capabilities that make Genius a “fit” for Pollo Campero

- In-House, seasoned Project Management resources.
- Proven ability to scale rollouts - domestically and internationally.
- Network of certified installation technicians.
- Integrated with leading delivery providers and 100's of other service partners.
- Warehouses with staging, shipping, depot, kitting, etc. across U.S./Canada.
- Hardware “Break/Fix” support.
- 24/7/365 technical support.

Multiplying What's Possible

Bringing more value to Pollo Campero

Global Payments and Worldpay have joined forces. This means broader capabilities, greater reach, accelerated innovation and more expertise to support merchants and partners at every stage of their growth. Explicitly for you, this provides access to innovative restaurant technology, powerful payments abilities, broader commercial scale and international capabilities through one strategic relationship. The solutions and services we're known for aren't going anywhere. And now it provides a worthy incentive to consolidate your vendors to one, meeting one of your corporate objectives.

 More capabilities Smarter technology and a broader range of solutions to serve even more types of businesses	 More reach Expanded presence in more locations, providing broader market access to help businesses scale with confidence	 More innovation Increased investment in developing and delivering the next generation of payment technologies	 More expertise The exceptional service and reliability you expect from us – now available across more products, services and regions
---	---	--	---

Global Payments is joining forces with Worldpay, multiplying what's possible for our clients and partners by focusing our resources toward a single vision — to ignite business growth and enrich lives around the world.

Our combined capabilities and capacity allow us to deliver more products and services to merchants of all sizes across the globe. In an industry where scale and distribution capabilities matter more than ever, we are well positioned for growth opportunities.

Our combined talent has the innovative spirit and expertise to anticipate what our clients need, and we are putting all our energy and expertise into building feature-rich products and distinctive service experiences.

Importantly, the products clients rely on, including flagship solutions like Genius and Worldpay's ecommerce capabilities, are now even better together.

Acquiring via **worldpay**

Worldpay provides payment processing services across all US states through licensing agreements with Mastercard, Visa, and Interac. Our platform seamlessly handles both Card Present (CP) and Card Not Present (CNP) transactions, ensuring reliable and secure payment solutions for a wide range of business needs. In addition to VISA, Mastercard, AMEX, JCB and Interac, Worldpay also supports digital wallets.

Implementation Plan

Implementation Plan for Pollo Campero

On the following pages, we have framed an implementation plan for your review and consideration. This plan includes the following elements:

- Expected Dependencies
- Key Success Factors
- Technical Roadmap
- Working Together
- Support Plan
- Price Proposal

Additionally, after understanding your strategic goals and tactical needs, we believe we are uniquely positioned and experienced to bring this concept to reality—from Lab to Pilot to Roll-Out.

We look forward to working closely with you to review and refine this implementation plan.

Expected Dependencies for Pollo Campero

Clear Scope Definition

- Initial pilot objectives
- Key success factors
- Menu and branding

Integration Considerations

- Payments
- Kiosk
- Loyalty & CRM
- Mobile Ordering & Delivery

Configuration & Menu Information

- Menu set-up & finalization
- Lab work and feedback with ops

Dedicated Resources

- Identify key team members from Pollo Campero and from Genius to be dedicated to the project

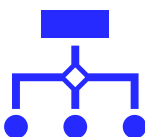

Other Dependencies

- Master Services Agreement

Key Success Factors for Pollo Campero

Success on the planning and execution of Pollo Campero solution will be driven by the establishment of a clear work breakdown structure, documented requirements/gaps for Pilot, a shared lab environment, an operational readiness plan, detailed pilot plans, and an overall program governance model.

Program Governance & Team Structure

- Executive steering committee established to drive overall vision, direction, and decision making
- Leadership team built to manage execution of the project plan and provide clear issue and change management
- Project managers and functional team leads assigned to develop and implement a documented project plan and to report regularly on status, issues, and risks

Pilot Requirements

- Discovery & Feedback
- Development & Integration Priority Mapping
- Delivery Schedule

Shared Lab

- Success criteria
- UAT Support
- Customized Pollo Campero Configuration Management
- POC Development / Testing

Operational Readiness Plan

- Equipment Ordering / Installation
- Employee Training & Knowledge Base
- Customer Support & IT System Monitoring
- Professional Services
- Staff Readiness

The most important success factors for Genius and our parent company Global Payments are the people and processes that we put in place to deliver a consistently top-notch boarding experience.

For Pollo Campero, we would assemble our A-Team to ensure milestone delivery while remaining flexible to incorporate learnings as they emerge.

Below is an example of our activities, milestones, stage gates and owners of each:

Onboarding Milestone Activities & Cross Functional Owners

Milestones	Pre-Work	Kick-Off	Lab	Pilot	Roll-Out	Normalize

Technical Roadmap for Pollo Campero

We pride ourselves on designing client-centric project teams to work collaboratively and transparently in delivering required solutions on time and on budget. Our goal is simple: To keep our commitments while delighting Pollo Campero during the initial stages and at full scale.

Discover Phase

- **Requirement Identification:** Facilitate IT & Operations deep-drive reviews based on program scope & requirements.
- **Timeline:** Define project timeline and key dependencies based on development needs and Pollo Campero deployment goals for the project.
- **Onboarding:** Assign a technical project leader to ensure milestone delivery, acceptance testing and full implementation.

Lab Phase (Current Genius Solutions)

- **Functional Gaps:** Those not identified during Discovery.
- **Integrations:** Stand up integrations - ex: NCR, Oracle, etc.

Pre-Pilot Phase

- **Operational and Real Estate:** Working with the Pollo Campero team to identify key locations and footprints to identify where key activities need to be located.
- **IT Inputs: Define** networking requirements.
- **Hardware:** Assemble key hardware component list and determine if any hardware customization is needed.
- **Installation:** Define an installation playbook with procedures and quality checkpoints to ensure locations are ready to open and begin transacting business.

Pilot Phase

- Installation of initial deployments.
- Onboarding team members will be onsite for deployment throughout go-live watching operations, training, and troubleshooting any areas that need to be addressed to ensure the first location operational.
- Record broad feedback and ensure that the next installs and stores consider the benefits of our initial learnings.

Market Phase

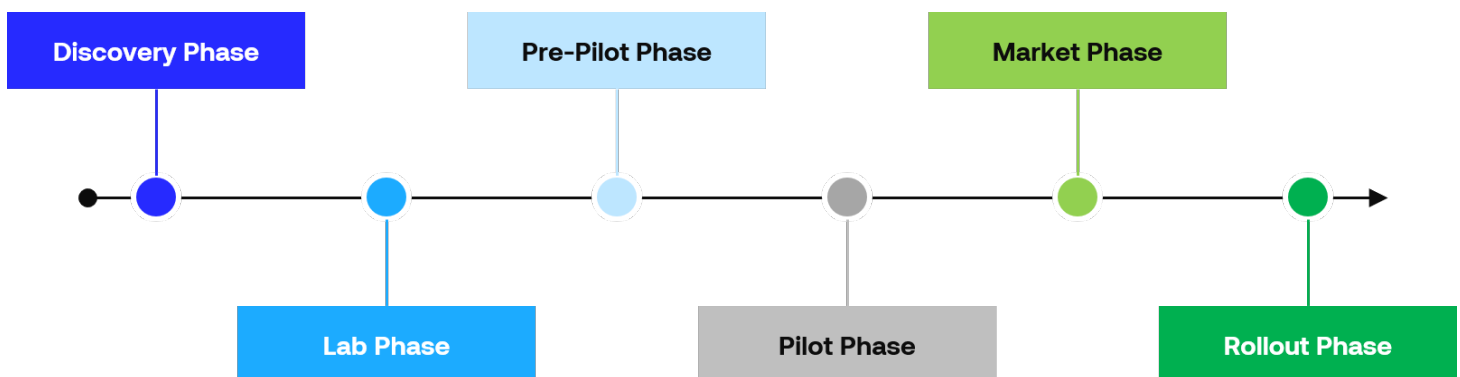

- Installing in 5-20 locations
- Validating different operating and deployment models
- Perfecting configurations, fixing bugs
- Build out key training guides and ensure scalability of roll out plans
- Validate stability to ensure infrequent issues do not show up as scale is achieved

Rollout Phase

- Operationalize roll outs
- Build out key procedures for new location openings
- Convert any already existing locations (if applicable)
- Standardize remaining training
- Ensure support model matches operations
- Monitor and iterate

Careful coordination and project management will be critical to our success. The preliminary, high-level roadmap below outlines our approach. We have also factored in third-party dependencies as well as any areas where we believe that our solutions allow for accelerated delivery.

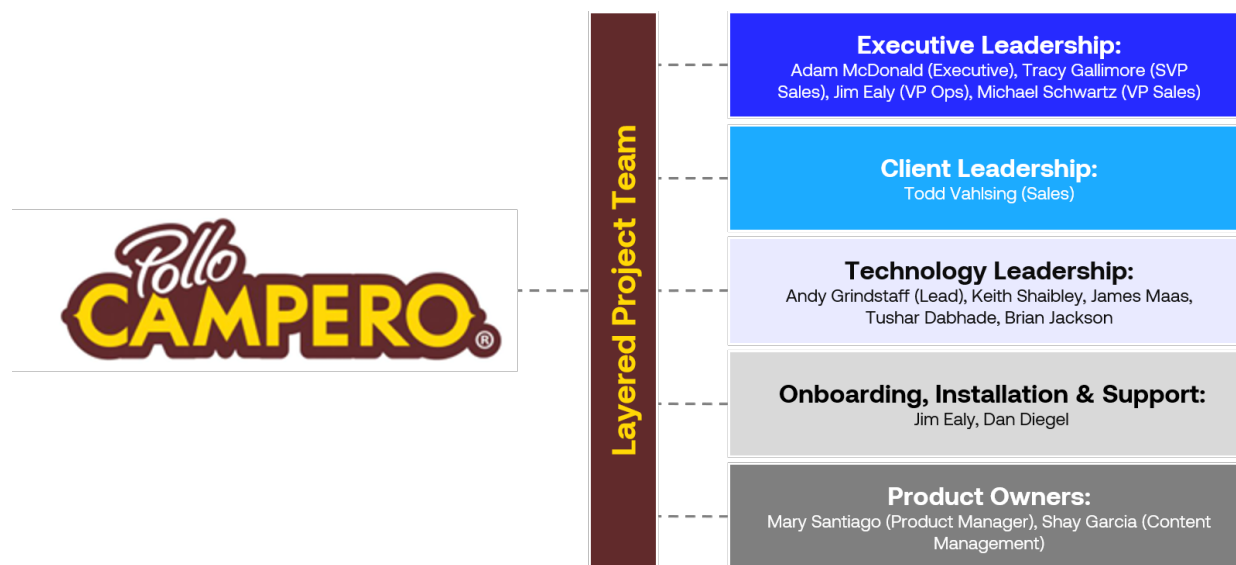

Below is a very preliminary timeline for moving the project forward. We look forward to collaborating with you and your team to define a detailed plan of action unique to Pollo Campero goals.

Working Together on Pollo Campero

Our layered Pollo Campero Team will include the engagement of our full leadership team, our technology leaders, our onboarding solution team, our respective product owners, and our support operation.

Our Pollo Campero Team and structure is overviewed below:

A dedicated Pilot Project Manager (PPM) will be assigned to Pollo Campero. The PPM's project team will work closely with all teams to establish the processes and procedures for a successful deployment. The PPM will have a direct line to the product and development teams supporting the process, and immediate access to senior management if needed. Seamless, warm transition between your Pilot Project Team and your supporting Project Management Team will occur once all parties are ready to move from Pilot to Production status.

Throughout our relationship, Genius' leadership will be engaged to ensure success.

Ongoing Support

Our Support Vision for Pollo Campero

We understand your commitment to your restaurants and the customer experience. Our future-focused support team combines exceptional service with decades of expertise and the latest technology. We provide 24/7/365 support that empowers operators to run their restaurants effectively and efficiently, so they can focus on delighting customers.

Expertise

With decades of experience, our support team knows how important it is that technology issues are resolved quickly and accurately. Our goal is to be your partner and continuously improve your experience with our products. Our agents and leadership team have years of experience not just with QSR technology but also the QSR industry. We understand how technology issues impact your teams, your customers, and your bottom line.

Customized Service

Genius Support knows that great service is not one size fits all. We create unique support models to meet your business needs and to keep your operations running smoothly. Customized SLAs, dedicated channels, programmable case routing, and proactive alerts are just some of the ways Genius Support will adapt to ensure your satisfaction and success.

Technology Leaders

Empowered by cutting edge technology, Genius Support offers unmatched ease of access, efficiency, and customer satisfaction. We leverage the latest solutions to proactively correct live issues, automate diagnostics, and identify root cause to streamline response / resolution times – all to continuously improve our performance and your operations.

Support Customer Communities

With an average tenure of over 5 years, our experienced local support experts provide dedicated support channels and resources to support deployments and day-to-day operations. Those multiple support channels include SMS, Chat and Customer Communities. Our Customer Care team also has advocates to monitor service levels, identify trends and act on customer concerns or requests, while our Voice Responder AI interaction replaces overflow/voicemail. Lastly, our Proactive Support team helps identify potential issues and takes action before impact to the restaurant.

We have the focus, expertise, and resources to accommodate Pollo Campero needs now and in the future.

Pollo Campero

Objectives

Objectives

Through this initiative, Pollo Campero seeks to accomplish the following:

Modernize the guest-facing menu board experience at all locations with high-quality, reliable digital display systems for both interior dining and exterior drive-thru environments.

With Genius Digital Menu Boards, Pollo Campero can modernize guest-facing menu boards across interior dining and exterior drive-thru environments using a cloud-based Digital Menu Board solution for dynamic content.

Govern Menu Board Content

Manage and govern menu board content at scale with a fully centralized, enterprise-grade CMS that supports the complete lifecycle of menu board content management across all domestic restaurant locations. Authorized users can create, manage, schedule, publish, and roll back content within a single interface using intuitive layout tools and streamlined deployment workflows.

Flexible Layout Templates

Content creation uses flexible layout templates and dynamic publishing tools, while scheduling provides precise control over when and where content is displayed. A deployment engine distributes content to all assigned locations, and built-in rollback enables quick reversion to prior versions to support operational continuity and minimize risk.

Synchronize Content

Synchronize pricing, item availability, and promotions by integrating with digital menu boards, with updates deliverable in real time. How quickly changes appear depends on each digital menu board's ingestion and processing speed, which is typically configurable in settings.

Native Capability and Third-Party Integrations

We currently support native pricing and OCU integrations with Genius POS, PAR Brink, and NCR. For other providers, we offer APIs that enable the exchange of product, pricing, and order data to support DMB functionality and drive-thru order confirmation use cases.

DMB Service Options

Genius has two variations on DMB service options: a self-service model, or a concierge model where the Genius team can assist with or fully manage content operations, including content updates, scheduling, and deployment execution. Digital Menu Boards can be enabled based on the business's use cases and can be added after implementation as needed.

Implement a centralized content management system (CMS) that enables corporate and, where applicable, field-level teams to update pricing, menu items, and promotional content efficiently and accurately.

A centralized CMS is provided through the Genius platform, enabling authorized users to create, manage, schedule, publish, and roll back menu board content from a single interface.

Control Brand Standards

Corporate teams can centrally create and control brand standards and national campaigns and distribute them across locations, while also supporting segmentation for regional campaigns using hierarchy, tags, language, and other metadata for targeted variations by region. Field-level needs are supported through configurable franchise-level business attributes (including product availability, promotional opt-ins such as LTOs, and custom messaging), with franchisees able to manage updates individually or in bulk and enter localized text at the site level.

Operator-Managed Menu Controls

Our platform is designed to support a clear distribution of responsibilities between corporate and franchise operators through structured, operator-managed menu controls. Pricing, menu items, images, and promotional content can be managed through an intuitive user interface. The system enables organizations to maintain brand and operational consistency while providing franchisees with appropriate flexibility within established governance controls.

Content Scheduling

Menu board content scheduling supports start and end availability date and time, day-of-week and other attribute-driven rules at the design level, dayparting at the layout level with centrally managed daypart schedules, and calendar-driven campaigns and limited-time offers at the deployment level with no restriction on how far in advance content can be scheduled.

Integrations

Digital menu board integrations support pricing, item availability, and promotional synchronization, with updates deliverable in real time (timing will depend on each digital menu board's ingestion and processing settings).

If additional operational support is needed, managed services can assist with or fully manage content updates, scheduling, and deployment execution on behalf of Pollo Campero.

Allow for integration with POS Platforms from Oracle and NCR to allow for automatic price and inventory updates, as well as Order Confirmation at the outdoor screens.

Genius is a platform built on exposable APIs to make it integration friendly. We are always open to integrations to help support our clients' needs. We do require an NDA and Developer Agreement with the 3rd party integrator, and this can include fees as well.

Reduce operational burden on IT and Marketing teams by minimizing manual menu change processes.

Our Genius Digital Menu Board features were built to assist in reducing operational burden on IT and Marketing teams:

Operator Enablement

Reduce lengthy approval cycles and support calls by empowering operators to opt into brand-approved Limited Time Offers (LTOs) through business attribute-based controls and manage item availability using brand-governed depletion switches. An intuitive user interface enables operators to quickly activate approved promotions, control menu visibility, and execute localized menu changes within established brand governance guidelines, reducing operational overhead while maintaining consistency and compliance.

Centralized CMS

Operational overhead is further reduced through a centralized CMS where authorized users can create, manage, schedule, publish, and roll back menu board content from a single interface using intuitive content layout tools and streamlined deployment workflows. Flexible layout templates, dynamic publishing tools, a deployment engine for distribution to assigned locations, and built-in rollback help maintain operational continuity and minimize risk during changes.

Promotional Products, Prices, and Discounts

Pricing, item availability, and promotions can be synchronized to digital menu boards, with updates delivered in real time (with display timing dependent on each board's ingest and processing configuration).

DMB Service Options

If additional support is needed, managed services can assist with or fully manage content updates, scheduling, and deployment execution to provide scalability and consistent, high-quality content delivery during periods of limited internal bandwidth or increased demand.

No-Code Editor

A no-code editor supports menu updates, and the platform powers both indoor and outdoor displays.

Ensure consistency in brand presentation and menu accuracy across all locations.

Genius Digital Menu Board supports consistent brand presentation and menu accuracy by centralizing menu board content management across all domestic restaurant locations in a single CMS where authorized users can create, manage, schedule, publish, and roll back content.

- Standardized content creation and controlled publishing are supported through flexible layout templates, dynamic publishing tools, precise scheduling of when and where content displays, and a deployment engine that distributes content reliably to all assigned locations.
- Menu accuracy is maintained by enabling operators to update menu items, pricing, images, and promotions and quickly schedule menu changes via an intuitive UI, with menu tailoring by time and location when needed.
- Real-time menu updates and pricing synchronization further support accurate, aligned menus across indoor and outdoor displays.
- Consistency and governance are reinforced through enterprise-grade, location-based access controls: corporate IT and designated corporate roles can oversee all domestic locations, while franchisees, brand partners, and store-level users are limited to their assigned store(s) with no visibility into other locations.
- If additional operational support is required, managed services can assist with or fully manage content updates, scheduling, and deployment execution to help maintain consistent content delivery across the restaurant network.

Establish a scalable solution that can support new store openings and future technology integrations, including potential dynamic upselling and dayparting functionality.

Scalability and Future Innovation

The Digital Menu Board solution, powered by the full Genius technology stack and open API architecture, is designed to scale efficiently across new store openings while supporting evolving business and technology requirements. The platform already includes native capabilities for dynamic dayparting and suggestive selling through our Content Designer interface, enabling brands to tailor menu content, promotions, and upsell opportunities based on time of day and other business rules.

While these capabilities are deeply integrated with the Genius POS ecosystem, the underlying architecture is designed for extensibility. Through our open APIs, dynamic upselling, dayparting, and related menu experiences can be integrated with third-party POS providers, allowing brands to maintain flexibility in their technology roadmap while leveraging advanced digital menu board functionality. This approach provides a scalable foundation for future innovation without requiring significant changes to the core menu management and content delivery platform.

Meet or exceed applicable ADA, local code, and environmental durability requirements for both indoor and outdoor installations.

Genius is in compliance with applicable ADA, local code, and environmental durability requirements for both indoor and outdoor installations.

Ensure quality and timely delivery, installation, support and maintenance of all the hardware components with white glove service available.

Genius will be responsible for the quality and timely installation, testing, and go-live support for the DMB system, with installation, testing, and event support costs included in the proposal.

In store music and Guest Wi-Fi can also be considered as a way to reduce vendor cost.

Genius understands Pollo Campero's interest in evaluating music and guest Wi-Fi as optional components to reduce vendor cost. Genius offers a different path to

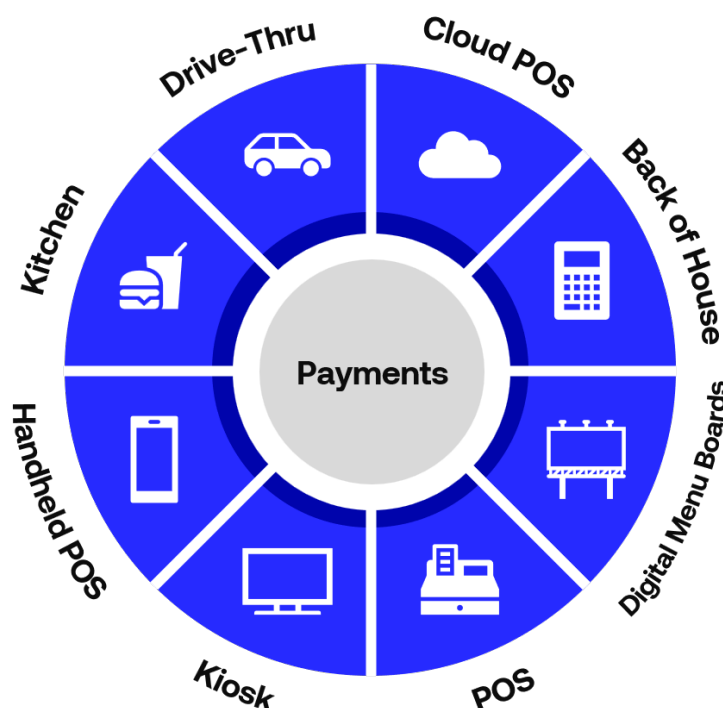

achieving that objective - consolidating digital menu boards with higher-value technology and/or payments capabilities across the restaurant operation.

Broader Platform

As a full-service QSR partner, Genius has solutions across the entire landscape of your operation. From back of the house to kiosks out front and drive-through, we have the complete package to optimize your restaurants.

Better Economics via Consolidation

Combining selected Genius Solutions with Global Payments/Worldpay can create greater overall economic value than consolidating digital menu board with peripheral services alone. As the relationship develops, we can evaluate bundled commercial structures designed to reduce total technology costs, simplify vendor management and improve operational efficiency.

Strategic Partner with Scale

Global Payments and Genius bring financial strength, restaurant-industry experience, and nationwide delivery capabilities to support Pollo Campero's current needs and future growth. A broader strategic relationship can provide clearer accountability, coordinated support, and greater long-term value than managing multiple independent technology providers.

Action Standard

Action Standard

Responding vendors are expected to address the following action areas within their proposal:

Needs Assessment & Site Survey — Conduct or provide a process for site surveys at existing and new locations to assess mounting requirements, electrical needs, sight lines, and environmental conditions for both interior and exterior installations.

Yes. Each location deployment begins with a kickoff email/meeting with restaurant stakeholders, during which the site survey is scheduled. During this kick-off, all the information needed for the assessment will be communicated by the Genius team, like: number, type, and location of devices, electrical architecture of the site, environmental conditions inside and out, sight lines, and more.

Each location should have a site survey so the Genius team members can understand its operations and use cases. The site survey also generates the initial hardware recommendations for the restaurant team to review.

Hardware Procurement & Supply — Provide commercial-grade display hardware appropriate for QSR environments, including weatherproof exterior-rated screens and appropriately sized interior displays.

Yes. Genius can procure and supply commercial-grade display hardware, architecture, and media players for both indoor and outdoor Genius Digital Menu Boards deployments, as part of an end-to-end solution that includes hardware procurement, content management, installation, and nationwide deployment support.

Existing Equipment Compatibility — Indicate whether the proposed solution can generally be adapted to and operate with Pollo Campero's existing digital menu board equipment, or whether new equipment would be required. Please explain what information or site assessment would be needed to confirm compatibility and identify any assumptions or potential additional costs.

Yes. Genius can generally support the reuse of Pollo Campero's existing digital menu board displays, subject to verification of the installed equipment and its remaining useful life. In many cases, new display hardware is not required.

As part of the discovery and site assessment process, Genius will evaluate the manufacturer, model number, age, condition, and capabilities of the existing displays to determine the most appropriate deployment architecture and recommend the best long-term solution. Depending on the equipment and its expected lifespan, existing displays may be reused with a Genius media player/controller or, where supported, through a controllerless deployment model.

To assess compatibility, we would request details regarding the make and model of the displays, as well as any additional information needed to validate connectivity, mounting, power requirements, network infrastructure, and overall system compatibility. Based on this assessment, Genius will identify which components can be retained and provide recommendations that balance reliability, performance, and total cost of ownership.

In scenarios where existing displays are not natively supported for controllerless deployment, Genius can provide a controller-based solution that maximizes the value of the current display investment. Our media player architecture supports dual-display output, enabling a single device to power two menu board displays. This approach can significantly reduce hardware, installation, and ongoing support costs compared to deploying a dedicated player for each screen, while still delivering a fully featured digital menu board experience.

This flexible deployment model allows Pollo Campero to leverage existing assets wherever practical, minimize capital expenditures, and maintain a scalable foundation for future growth and technology enhancements.

Installation — Manage the full installation process, including coordination with Pollo Campero’s construction, facilities, and operations teams to minimize disruption to restaurant operations.

Yes. Genius can manage end-to-end installation for Genius Digital Menu Boards deployments, including coordinating pre-install activities, scheduling, and on-site execution to help limit restaurant downtime and disruption. Our team of installation experts can work with Pollo Campero’s construction, facilities, and operations teams to minimize disruption to restaurant operations.

De-Installation - Manage the full de-installation process for Closing Stores, including coordination with Pollo Campero's facilities and IT teams. Manage all inventory of de-installed hardware in vendor's facility for the purpose of being redeployed at other stores.

To be determined. De-installation is not a standard provided service. However, if it is required we could work out de-installation plan with the appropriate costs.

Content Management System (CMS)—Deliver a user-friendly, cloud-based CMS platform that allows CUSA to manage menu content, pricing, promotions, dayparting and scheduling across all locations.

Yes. The Genius Digital Menu Board solution provides a centralized, cloud-based CMS that enables CUSA to manage menu content, pricing, promotions, dayparting, and scheduling across all locations from a single platform.

The CMS supports enterprise-scale governance while allowing controlled flexibility at regional and franchise levels through configurable roles, permissions, and content hierarchies. Users can create, manage, schedule, publish, and roll back digital menu board content from a centralized interface with built-in design, deployment, and approval workflows.

Menu content, pricing, images, and promotional assets can be managed through an intuitive WYSIWYG content designer. Dynamic pricing components ensure site-level pricing automatically reflects location-specific pricing data, eliminating the need for manual content updates when pricing changes occur.

The platform provides robust dayparting and scheduling capabilities, allowing menus, promotions, and content layouts to automatically change based on time of day, day of week, location attributes, or other business rules. Campaigns and limited time offers can be scheduled well in advance with defined start and end dates or activated immediately as business needs require.

The solution is designed to support a distributed operating model, enabling corporate teams to maintain brand standards and governance while allowing operators and franchisees to manage approved local menu content, promotions, and pricing within established controls. This ensures consistency across the brand while providing the flexibility required for location-level execution.

Systems Integration – Deliver a platform that can update pricing and inventory availability on a near real time basis. And allow for the ability to identify areas within a POS transaction to dynamically upsell at the drive thru (upgrade to a large drink, for example).

Yes. The Genius Digital Menu Board solution can update pricing and item availability on a near real-time basis and support dynamic upsell prompts within the ordering flow, including drive-thru scenarios.

Near Real-Time Pricing and Inventory Availability Updates

Pricing changes can be delivered in near real time, including to digital menu boards, supporting pricing synchronization across channels and locations.

Item availability states are also supported and can dynamically drive menu behavior such as panel suppression, item disablement, or content replacement. For example, items can be manually marked as unavailable ("86'd") or updated through inventory system integrations to indicate out-of-stock status, automatically removing or suppressing associated menu content from the customer experience.

Changes are governed through a centralized menu and content management framework and may be initiated through user interfaces or APIs, depending on the integration architecture and business workflow requirements.

Dynamic Upselling Within POS Transactions and Drive-Thru Ordering

Genius supports upsell and suggestive selling workflows through configurable cross-sell and upsell prompts that can present related-item offers, upgrades, add-ons, and promotional recommendations during the ordering process. These experiences can be delivered through digital menu boards and drive-thru channels, supporting use cases such as prompting guests to upgrade a beverage size, add a complementary item, or select a premium menu option.

The platform's Content Designer and suggestive selling capabilities support the configuration and management of these experiences, including daypart-specific and promotion-driven upsell opportunities.

Integration Considerations

The capabilities described above are fully supported within the native Genius ecosystem, where Genius POS, menu management, inventory, and digital menu boards operate as an integrated platform.

For deployments utilizing a third-party POS provider, a discovery and integration assessment would be conducted to validate available transaction, pricing, inventory,

and menu data, as well as the APIs and event frameworks exposed by the POS vendor. The extent of real-time pricing synchronization, inventory-driven menu updates, and transaction-based upsell opportunities will depend on the capabilities of the existing POS platform and its ability to provide the required data elements. Genius' open API architecture is designed to support integration with third-party systems; however, final functionality and implementation approach would be confirmed during the discovery phase.

Training — Provide training for corporate administrators and as needed, field users on CMS operation and day-to-day management.

Yes. We offer demonstrations and virtual training formats and will work closely with your teams to ensure a thorough knowledge transfer. We look forward to discussions regarding on-site training support.

- **Self-serve training** can be launched directly from within the software. Instructor-led training is available as needed, depending on the subject matter.
- **Genius Academy (our LMS)** is provided at no cost and tracks completed training and certifications. We build curricula to certify learning groups on necessary functions and features.
- **Training materials** include video links and documentation links to specific topics. We also provide user guides and other training content which can be made available on your LMS portal/platform.
- **Post-implementation training** from our Product Education Team works with business leaders and subject matter experts to scope the need, design instruction, create the learning schedule, determine the assessment process, and evaluate the materials.

Ongoing Support & Maintenance — Outline a comprehensive service and maintenance program, including response time SLAs, remote diagnostics, hardware replacement protocols, and escalation procedures.

Genius supports ongoing operations with documented incident plans, defined escalation paths, and proactive monitoring and alerting for the Genius platform.

For critical issues, the Genius Support Team follows documented plans covering internal escalation and customer notifications; when a possible Sev1 event is detected (via automated alerts or increased case volume), it is escalated to DevOps, Production Support, and R&D, a Sev1 bridge line is opened for remediation, and customer notifications are sent as agreed with the customer.

Detection, escalation, and communications are supported by configurable near-real-time alerts (SMS, email, and programmatic events) across Sales/Operational Events, Payroll, Hosting/Cloud Operations, and 3rd Party Integrations. Monitoring integrates with enterprise tools including LogicMonitor, ElasticSearch (log alerting & APM), and vendor-specific tools, with automated routing across 1st-, 2nd-, 3rd-level, and engineering teams based on severity. During severe problems, outage notifications are sent to clients, and external Slack channels are used for real-time communication.

Our customers typically chose incident SLAs for response time and resolutions times based on their business needs. We can also customize them, to provide faster times during live events. Our typical Support SLAs include a 90 second Average Speed of Answer (ASA) and a 5% Abandon Call Rate. While we work with each client to determine the best support model, below is an example of common SLAs.

During Live Event

- **Priority 1:** Issue that causes a severe operational impact to the location/stand [Response - 15 minutes; Resolution - 90 minutes].
- **Priority 2:** Issue that causes a significant impact to location/stand [Response - 30 minutes; Resolution - 2 hours].

Standard

- **Priority 1:** Issue that causes a severe operational impact to the location/stand [Response - 1 hour; Resolution - 4 hours].
- **Priority 2:** Issue that causes a significant impact to the location/stand [Response - 2 hours; Resolution - 8 hours].
- **Priority 3:** Issue that causes minor/no impact to the location/stand [Response - 4 hours; Resolution - 24 hours].
- **Priority 4:** Other / Customer Inquiries [Response - 12 hours; Resolution - 48 hours].

For additional information, please refer to the **Ongoing Support** section of our Executive Summary above.

- **Warranty — Detail hardware and software warranty terms, including coverage periods, and what is included.**

Hardware warranty coverage is 3 years for all hardware/devices included in pricing/hardware quotes. Hardware continues to be supported after the warranty period; devices outside of warranty have a replacement cost.

Global's responses to the questionnaire should not be deemed to amend or modify any agreement.

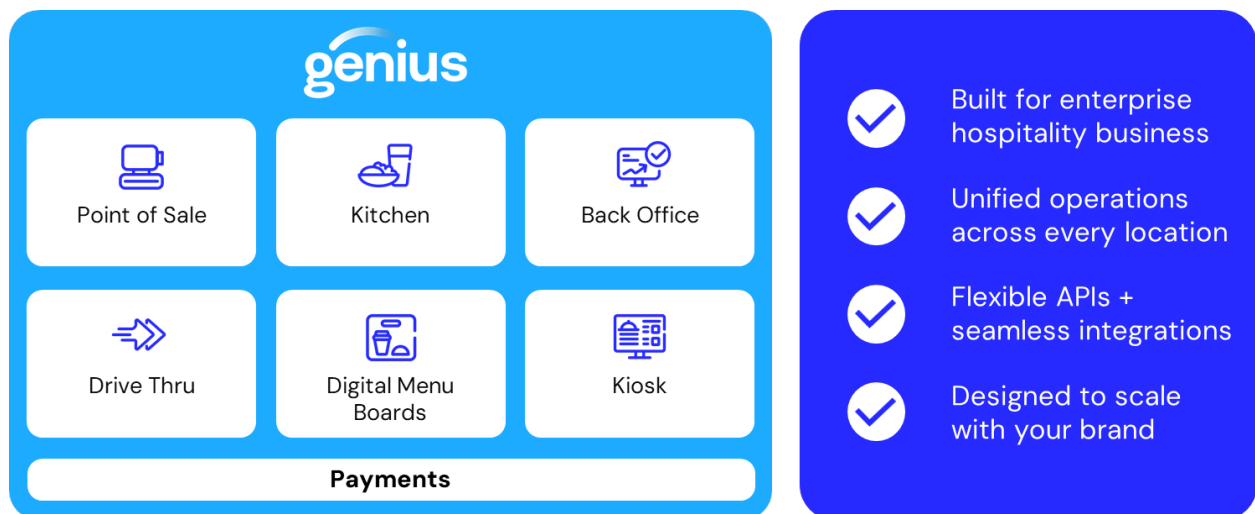

Total Genius Solution

The Value of **Full Genius Solution**

One unified partner for payments, POS, Back Office, and more.

While completely optional for Pollo Campero, implementing the full Global Payments Genius solution delivers a unified, cloud-based platform that brings all core QSR commerce capabilities into a single ecosystem. Since we're giving you information on our DMB solution, we wanted to take a few pages to restate the power of the complete Genius QSR stack.

By combining POS hardware, software, and payments into one integrated solution, businesses can streamline operations—from order entry and checkout to inventory and employee management—while supporting omnichannel selling across in-store, online, and mobile environments. This consolidation eliminates fragmented tools, reduces complexity, and enables a more consistent, high-quality customer experience.

Genius also directly drives revenue growth and customer engagement by expanding payment flexibility and enabling modern commerce experiences. Businesses can accept all major payment types—including contactless, mobile wallets, and gift cards—ensuring they meet evolving customer preferences, while features like loyalty and marketing integrations help increase repeat business. At the same time, next-day funding and flexible pricing options improve cash flow, and can help offset processing costs, delivering measurable financial benefits.

Finally, the platform is designed to scale and support long-term business success with enterprise-grade security, flexibility, and service. PCI-compliant infrastructure with encryption and tokenization protects sensitive payment data, while the cloud-based architecture enables real-time visibility and management from anywhere. Whether adding new devices, locations, or channels, Genius adapts to evolving needs, supported by tailored onboarding and 24/7 expert assistance. The result is a future-ready commerce foundation that reduces risk, improves efficiency, and empowers sustained growth.

Revenue Potential of Genius

The full Genius solution boosts revenue by removing friction across the entire buying and selling experience—making it easier for customers to spend more, and for businesses to capture every sale.

1. Capture more sales across every channel

Genius enables businesses to sell in-store, online, and on the go within a single platform, ensuring no missed revenue opportunities regardless of where customers prefer to shop. By supporting all major payment types, including contactless, mobile wallets, and global digital payment methods, it reduces checkout friction and increases conversion rates. When customers can pay quickly and easily with their preferred method, they are more likely to complete purchases and spend more per transaction.

2. Increase average ticket size and repeat business

Marketing, loyalty, and gift card capabilities can help businesses actively drive higher spending and customer retention. Promotions and loyalty incentives encourage upsells and repeat visits, while seamless customer experiences, especially in restaurants and retail, improve satisfaction and lifetime value. Over time, this leads to more frequent transactions and higher average order values, directly contributing to revenue growth.

3. Improve speed, efficiency, and throughput

By streamlining operations, from order entry to payment processing, Genius allows businesses to serve more customers in less time. Faster checkout lines, synchronized front and back of house operations, and mobile POS capabilities help increase transaction volume, especially during peak periods. The ability to take payments anywhere (e.g., kiosks, handheld devices) also helps capture incremental sales that might otherwise be lost due to long wait times or limited checkout capacity.

4. Protect and expand margins

Finally, Genius improves net revenue by optimizing costs and cash flow. Combined with flexible pricing and scalable infrastructure, businesses can grow revenue without proportionally increasing costs, improving overall profitability.

Bottom line: Genius doesn't just process payments—it actively creates revenue by increasing conversion, boosting customer spend, enabling faster transactions, and improving margins.

Additional Security for your Business

The full Genius solution improves security by embedding enterprise-grade protections directly into every step of the payment and transaction lifecycle—reducing risk while maintaining a seamless customer experience.

1. End-to-end protection of payment data

Genius uses end-to-end encryption and tokenization to secure sensitive cardholder data from the moment of capture through processing. This ensures that payment information is never exposed in readable form, effectively eliminating opportunities for interception or misuse. By replacing raw card data with tokens, businesses minimize their exposure to breaches and significantly reduce the scope of sensitive data stored in their environment.

2. Built-in PCI-compliant infrastructure

The platform is designed to meet PCI-DSS compliance standards, which are the industry benchmark for payment security. This means businesses leveraging Genius benefit from a system that is already aligned with strict regulatory requirements for handling payment data. As a result, organizations reduce their compliance burden, avoid potential penalties, and maintain trust with customers who expect secure transactions.

3. Reduced risk through a unified ecosystem

By consolidating POS, payments, and management tools into a single, integrated platform, Genius eliminates the need for multiple third-party systems, which can introduce vulnerabilities. Fewer integration points mean fewer gaps for potential cyber threats. Additionally, Genius actively blocks third-party access to payment data, creating a more controlled and secure environment compared to fragmented solutions.

4. Secure cloud-based management and monitoring

Because Genius is cloud-based, businesses gain secure, real-time oversight of transactions and operations from anywhere. This centralization improves visibility into

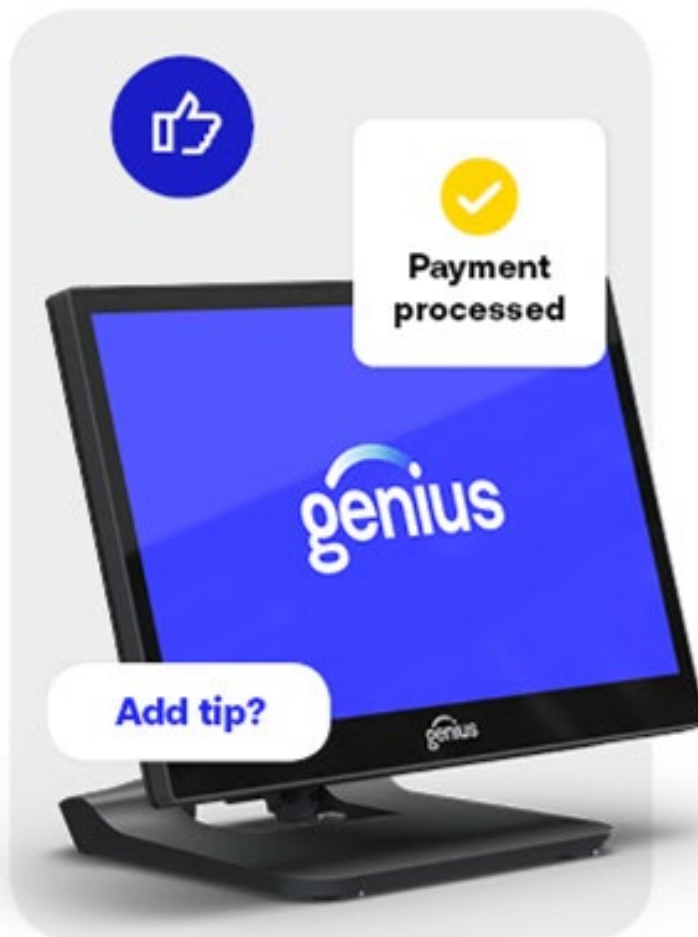

suspicious activity, enables faster response to potential threats, and ensures updates and security patches are deployed automatically, keeping the system protected against emerging risks without requiring manual intervention.

Bottom line: Genius improves security not just with individual features, but through a layered, integrated approach—combining encryption, compliance, controlled access, and cloud-based oversight to protect both the business and its customers while enabling confident, secure growth.

Genius POS

Upgrade to a modern, cloud-based point of sale designed for enterprise quick service and fast casual restaurants. With centralized management, real-time data sync, and offline mode, you'll keep transactions flowing in any environment — and deliver top-notch customer experiences every time.

Genius handles high volume without breaking a sweat. Take orders with speed and precision, process payments across every channel and increase the operational efficiency of even the most complex environments.

Compatible with any operating systems -

Works on iOS, Android, Windows and Linux, compatible with either GP hardware or customers hardware (rugged terminals and lightweight tablets).

Promotions and discounts — Easily set up and report on discounts and special offers.

Reduce workload for staff – User-friendly dashboards help decrease time spent on routine activities and minimize training effort. The Genius platform provides a single place to access and manage all key tasks.

Data Insights - Use role-based access to control brand, region or store, giving access to data and analytics that help make better business decisions and grow profitability for customers.

Reduce administrative workload – Automates routine employee management tasks, including time clock tracking and staff scheduling.

It's everything a traditional POS offers — and much more. Genius Enterprise POS delivers deep vertical integration with operations and workflows. It's designed with point-of-sale software functionality that supports centralized management, flexible hardware configurations, and robust APIs to connect with kitchen automation, loyalty programs and enterprise IT systems, making it ideal for high-volume, multi-location businesses.

Genius Cloud POS

Hardware and OS Agnostic

Genius Cloud POS can run on any hardware platform and operating system (Windows, Android, iOS) - a claim unique to the product in the QSR industry. This allows for ultimate flexibility in offerings to your operators while being able to run a unified platform across your system.

Ease of Deployment

Lower complexity of the Genius POS application implementation reduces the cost and need for highly technical personnel within your organization to roll out across the organization. Operators no longer need to rely on in-store personnel performing register updates to update menu items or prices they can push updates 24/7. Genius POS interacts with the Genius Portal and digital menus seamlessly. This allows for an easy install for new sites, upgrading an existing site to new software, or changing configurations at a site.

Responsive Design

Genius POS automatically draws the screen based upon the resolution of the device and updated cloud configurations.

No Servers Needed

Thanks to our patented peer-to-peer data sync capabilities, no servers or master terminals are needed at the site. Terminals are in constant communication through UDP to ensure 100% data integrity on site while maintaining cloud connection for backup. This cuts down on costs and eliminates single points of failure.

Ease of Integration

- Our cloud architecture makes integrations more accessible to third parties as Genius leverages microservices that take the burden off the in-store application
- Genius POS has an ever-growing number of existing integrations built on Restful APIs
- The Genius POS modern architecture and programming languages are supported by large software development communities
- Global Payments is eager to create strategic partnerships with companies that can help bring new technologies to our customers across the globe

Genius Back Office

Run a More Profitable Restaurant

More than 10,000 Enterprise QSR locations rely on Genius Back Office (formerly RTIconnect) and Mobile Restaurant Management to cut the fat out of food and labor costs and supersize profits.

Genius offers a different kind of back office that's easy to use in-store or on the go. Our powerful above store reporting will give you actionable information at your fingertips.

Key features include:

- Cloud-powered, hardware agnostic
- Enterprise-grade
- Role-based task lists help people focus on what's important
- Access from mobile app or browser
- Powerful food cost and inventory tools help control costs and waste; food cost variance accurate to the ounce
- Automated scheduling optimizes staffing, saves time, and helps manage labor costs
- One click to approve and send employee schedules
- Graphical summaries with one-click drill-through give insights at a glance

Back Office with Enterprise Reporting

Run a more profitable restaurant

Inventory, Food Cost Management

Control food costs and waste without the guessing

Labor & Scheduling

Optimize staffing and manage labor costs

Genius Handheld POS

Pollo Campero can access store and restaurant tools remotely, allowing you to monitor operations and make updates from any location.

The handheld POS reduces unnecessary steps for servers, enabling you to focus more on guest service and complete tasks more efficiently.

The handheld POS can be deployed easily across new locations, supporting growth without major operational changes.

- Connectivity options (Wi-Fi, 4G/5G cellular, Bluetooth)
- Secure payments
- Suggestive upselling features
- Real-time reporting
- Takeout and delivery order management
- Dynamic discounting features
- Marketing & loyalty programs
- Printed and digital receipts

Genius Kiosk

Self-ordering kiosk machines are interactive touchscreen devices that allow customers to place orders without needing to queue up or interact directly with staff.

Genius Kiosk lets guests take control of their experience, offering fast, accurate and personalized ordering designed to handle peak traffic with ease. Reduce wait times, improve order accuracy and alleviate front-of-house pressure — all while increasing bill averages with Genius.

Integrated with a POS system, kiosks streamline the checkout process and make ordering faster and more accurate.

Kiosk hardware options - From compact countertop models to full-sized freestanding units, we can work to ensure your requirements are met.

Unify menus counter to counter - Update menu flows and pricing instantly across Wingstop's network, so guests know exactly what's available.

More control, fewer errors - Lets your guests enter their own order exactly how they like it.

Tailored orders - Allows guests to customize their orders, including dietary adjustments, item modifications, and selecting past favorites.

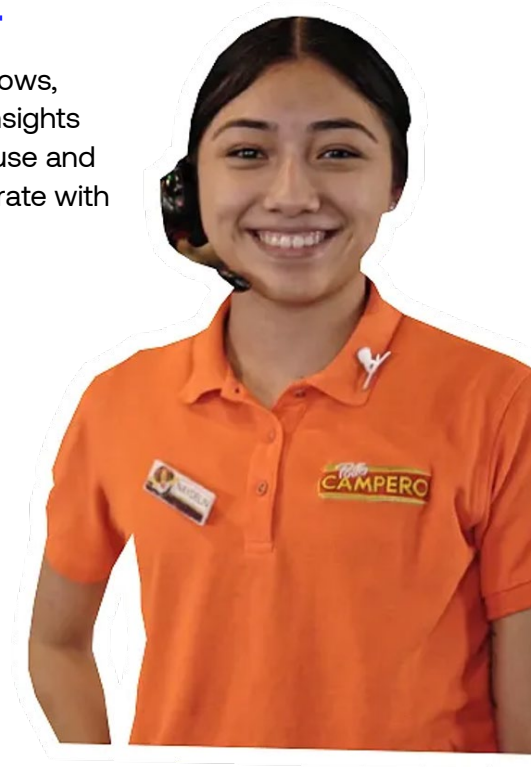

No pressure, no rush - Let guests browse the menu at their own pace — skip the checkout queue and take time choosing.

Genius Kitchen Management

Genius Kitchen, our kitchen management system, offers smart workflows, custom routing, user-friendly kitchen display systems and real-time insights that keep your restaurant operations in sync from front to back of house and across all your locations. Best of all? It's designed to seamlessly integrate with Genius Enterprise POS.

This is a cloud-based digital platform that streamlines and automates back-of-house operations, centralizing functions for kitchens like order management (including online ordering), recipe control, menu engineering, food prep tracking, labor optimization, inventory tracking and reporting.

- Display orders by prep station, priority or channel
- Role-based screens
- Sync in real time with POS, drive-thru tech and more

Recipe management

Recipe management across locations and tracks modifications in real time.

Order routing in real time

Dynamically directs incoming orders to the right kitchen stations to balance capacity, minimize delays and maintain smooth operations.

Inventory management

Monitors ingredient usage automatically, reducing waste through accurate tracking, and triggers timely reordering to keep kitchens supplied.

Load balancing

Distributes workload evenly across multiple preparation stations to prevent bottlenecks and maintain optimal efficiency.
