

PRODUCT PORTFOLIO MAP

Genius restaurant technology

McDonald’s routing reference

		One connected restaurant technology portfolio Genius brings enterprise commerce, self-service, kitchen, digital experience, drive-thru, payments and purpose-built hardware together within a flexible platform.
Prepared for	Jeff Coffland — McDonald's capability overview	
As of	August 12, 2026	
Portfolio	Genius restaurant technology	
Company	Global Payments	

How to read this map

- Each entry identifies the current product, its former Xenial/SICOM/RTI heritage, supported capabilities and relevance to McDonald's.
- Customer examples show demonstrated fit; they do not imply McDonald's approval or a production entitlement.

Core commerce and self-service

Genius Enterprise POS

Heritage	Xenial enterprise POS and Xenial Ordering, now part of the Genius Cloud portfolio.
Capabilities	API first, Cloud enterprise POS with centralized management, real-time synchronization, device and operating-system flexibility, rapid terminal failover and offline operation for up to 30 days. Works with existing hardware or Genius Hardware solutions. Supports Windows, Android, IOS and Unix operating systems. Supports multi-lingual and international locations.
McDonald's relevance	Relevant as an integration and restaurant-commerce platform reference.
Selected experience	CosMc's selected Genius Cloud POS as part of its integrated restaurant technology platform. Additional enterprise experience includes A&W Canada across 1,032 restaurants and 7 Brew across more than 530 locations.

Genius Kiosk

Heritage	Former public label: Xenial Kiosk hardware and software / Xenial Ordering Kiosk.
Capabilities	Self-service ordering with indoor/outdoor and multiple mounting options, favorites and repeat orders, multilingual and accessibility features, dynamic splash screens and pickup workflows.
McDonald's relevance	Relevant where McDonald's wants modular self-service or integration options, subject to global store standards and accessibility requirements.
Selected experience	More than 20 years of kiosk development and 15,000+ self-service solutions installed worldwide.

Kitchen, back office and payments

Genius Kitchen

Heritage	Xenial Kitchen Management (XKM), Kitchen Management and Order Management System (OMS), now within the Genius portfolio.
Capabilities	Kitchen displays route items to configured production stations, support destination-specific views such as drive-thru, and can provide order-ready status. Touchscrees and bump-bar interaction plus configurable ticket views.
McDonald's relevance	Relevant to end-to-end order flow, throughput and integration conversations—not as an assumed replacement for McDonald's kitchen production systems.
Selected experience	

Genius Back Office

Heritage	RTI, RTI Financial Accounting, Back Office and enterprise reporting.
Capabilities	Back-office and enterprise reporting capabilities spanning restaurant operations, inventory, labor, financial information and enterprise-level visibility.
McDonald's relevance	Connects restaurant activity with operational and enterprise reporting for more consistent decision-making across the system.
Selected experience	

Integrated payments and gateway

Heritage	Merchantware and Cayan heritage, now represented through Global Payments Integrated and Portico capabilities. Worldpay acquisition in 2026 adds more strength to the ecosystem.
Capabilities	One semi-integrated/API layer for counter, drive-thru, kiosk and digital commerce: EMV/contactless and wallets, card-present and online acceptance, P2PE/tokenization, hosted payment components, remote terminal management and device-based store-and-forward.
McDonald's relevance	Broad processing capabilities throughout the largest payment processing system in the world, both in store and above store.
Selected experience	CosMc's used Global Payments for payment processing; FreedomPay supplied the gateway for its unattended-payment requirement.

Digital experience and drive-thru

Genius Digital Displays

Heritage	SICOM DMB was first developed in 2009. After Global Payments acquired SICOM in 2018, the next-generation Genius DMB was developed as a complete replacement—not an extension of the former SICOM software.
Capabilities	Centralized content management, scheduled dayparts, local and corporate control, indoor/outdoor menus and order-confirmation boards. LG system-on-chip displays can retain scheduled content during an internet outage. Available with or without a media player.
McDonald's relevance	Global product with an enterprise level feature set.
Selected experience	CosMc's selected Genius indoor and drive-thru digital menu boards as part of its integrated restaurant technology platform. At Yoshinoya, 106 locations deployed digital menu boards, including 34 drive-thrus paired with a timer.

Genius Drive Thru

Heritage	SICOM Timer (1989) → rewrite (2001) → new monitor/UI solution (2014) → Drive-Thru Director with continued Genius enhancements. Vision, developed around 2022, is the 100% Genius next-generation timer.
Capabilities	Lane events from detectors, cameras and intelligent order-confirmation units; real-time vehicle visualization; single/dual-lane workflows; gamification; reporting/API. Zone configuration for stack size, pickup parking and pull-forward tracking across the customer journey.
McDonald's relevance	Supports speed-of-service visibility and a more complete view of the drive-thru journey, including queue, pull-forward and pickup activity.
Selected experience	CosMc's selected Genius drive-thru timer technology as part of its integrated platform. At Yoshinoya, 34 drive-thru locations paired digital menu boards with a timer and reported a 35% improvement in service time.

Genius hardware

A modular in-store hardware family

Heritage	Heritage: Xenial and SICOM POS hardware, portable tablets and rugged terminals. Configuration and naming may vary by Genius edition and geography.
Capabilities	Global Payments designs and owns the core Genius hardware specification, with Flytech as manufacturing partner. The portfolio supports modular countertop, handheld, kiosk and tethered configurations. Payment terminals and the iMin-based Genius All In One are separate device families.
McDonald's relevance	Hardware designed for the rugged QSR industry that has a history of performance.
Selected experience	CosMc's selected Genius hardware across its cloud POS and indoor/outdoor self-service environment. The broader portfolio provides one hardware identity across restaurant workflows.

Modular countertop

Merchant and customer-facing displays with countertop, low-profile and wall configurations.

Enterprise handheld

Portable enterprise POS for line-busting and mobile service, shown with integrated payment.

Portrait kiosk

Portrait self-service ordering and payment configuration.

Kiosk portfolio

Multiple kiosk and tethered configurations within the Genius hardware family.
